

RISHAV KUMAR

FULL STACK DEVELOPER (PHP , LARAVEL)

Address Siliguri, West Bengal, 734005

Phone

E-mail

About me

I am an experienced full-stack developer with 7+ years of experience in the industry. Looking for opportunities to show my skills are always open to learn new skills and always open to work in a new environment and to build relationships.

Technologies

Front end technologies

- Vue.js
- HTML , CSS
- Javascript
- Ajax
- React.js

Backend Technologies

- Php
- Laravel
- APIs Development
- MVC architecture

Tools i know

- Jira
- Trello
- Postman
- Swagger
- GIT
- Bitbucket
- Clickup

Server I know

- AWS (Ec2)
- Cpanel

- Vesta
- Hpanel from Hostinger
- Plesk

Work History

Designation - Full stack developer

Nov 2020 - Current

SRV Technology, Siliguri, West bengal

Responsibilities:-

Front-End Development:

- **User Interface (UI) Design:** Create visually appealing and user-friendly web interfaces using HTML, CSS, and JavaScript.
- **Front-End Frameworks:** Utilize front-end frameworks like Bootstrap, Vue.js, React, or Angular for building responsive and interactive user interfaces.
- **Client-Side Logic:** Write client-side JavaScript code for handling user interactions, form validation, and AJAX requests.

Back-End Development:

- **Application Development:** Develop web applications using the Laravel framework, following best practices and coding standards. This involves creating and maintaining the application's backend logic, routing, and controllers.
- **Database Design and Management:** Design and maintain the database schema, including creating tables, defining relationships, and optimizing queries. Use Laravel's Eloquent ORM for database interactions.
- **Front-End Integration:** Collaborate with front-end developers to integrate the front-end components with the Laravel backend. Ensure seamless communication between the front-end and backend systems.
- **API Development:** Create and maintain RESTful APIs using Laravel, allowing data to be exchanged with other services or client-side applications. Implement authentication and authorization for API endpoints.
- **Middleware and Security:** Implement middleware for handling HTTP requests, such as authentication, authorization, and input validation. Ensure the application follows security best practices to protect against common vulnerabilities.
- **Authentication and Authorization:** Implement user authentication and authorization systems, including features like user registration, login, password reset, and role-based access control.

- **Testing:** Write unit tests and feature tests to ensure the reliability and correctness of the application code. Practice test-driven development (TDD) when appropriate.
- **Deployment:** Deploy Laravel applications to web servers and configure server environments. Set up deployment pipelines and continuous integration/continuous deployment (CI/CD) processes for automated deployments.
- **Performance Optimization:** Identify and optimize bottlenecks in the application, including database queries, code execution, and caching strategies. Monitor application performance and make improvements as needed.
- **Error Handling and Logging:** Implement error handling mechanisms to gracefully handle exceptions and errors. Use logging tools to track and debug issues in the application.
- **Version Control:** Use version control systems like Git to manage codebase changes, collaborate with team members, and maintain a history of code revisions.
- **Documentation:** Create and maintain documentation for code, APIs, and project architecture. Ensure that team members and stakeholders can easily understand and use the codebase.
- **Collaboration:** Collaborate with cross-functional teams, including front-end developers, designers, product managers, and quality assurance (QA) testers, to deliver high-quality solutions.
- **Code Reviews:** Participate in code reviews to ensure code quality, adherence to coding standards, and knowledge sharing among team members.
- **Continuous Learning:** Stay up-to-date with the latest Laravel updates, best practices, and industry trends. Continuously improve your skills and share knowledge with the team.
- **Problem Solving:** Analyze and troubleshoot issues reported by users or testers, and provide solutions in a timely manner.
- **Scalability:** Plan for and implement scalability measures to ensure the application can handle increased load and traffic as it grows.
- **Security Audits:** Perform security audits and assessments of the application to identify and address potential vulnerabilities.
- **Code Maintenance:** Maintain and refactor codebase as needed to improve code quality, readability, and maintainability.
- **Project Management:** Collaborate with project managers to estimate development tasks, provide progress updates, and meet project deadlines.

Designation - Full Stack Developer

Sep 2017 - Jan 2020

Ambrossia Infotech, Kolkata, West bengal

Responsibilities:-
